

Freedom

Illumination.
Unleashed.

No cables.

No beltpacks.

No buttons.

No problem.

Orascoptic

Superior Visualization™

Experience freedom in a whole new light.

Cordless Design

The revolutionary Freedom light is powered by small rechargeable battery pods that attach directly to the loupe frame. There are no cumbersome cables or heavy belt-packs!

Constant Current Technology

The lightweight headlight delivers 4,000 foot candles. Constant current technology ensures that the illumination will maintain its intensity over the full run-time of the batteries.

Capacitive Touch Controls

Innovative capacitive touch technology allows the practitioner to control the light while holding instruments, and also eliminates bacteria traps associated with traditional buttons, knobs, or switches.

Universal Mount

The compact pods and lightweight headlight attach to virtually any TTL loupe model on the market.

Counter-balance Design

The pioneering design features a weight-neutralizing counter-balance between the battery pods and the headlight. Weight disbursement can be customized to relieve the forward pressure on the nose.

The Freedom system includes a battery charging station and 4 fast-charging hot swappable batteries that deliver 6 hours of illumination.
